NRW launches new family of condensing units under PressCold brand

Leading wholesaler Northern Refrigeration Wholesale Ltd has joined forces with Dawmec to launch a new range of state-of-the-art condensing units under the new PressCold brand.

The first products to be introduced are a new series of DWM Copeland™ semi-hermetic condensing units, based on high efficiency Copeland® brand S-reed compressors manufactured by Emerson Climate Technologies.

The units, available exclusively from NRW, cover capacities from 5 to 30hp, and come as standard with HP/LP, pressure relief valve and oil safety switch, where applicable.

Optional extras include oil separator, return line, suction line accumulator, condenser fan speed control, crank-case heater, capacity control and metal housing.

Dawmec will hold stocks of all components required to assemble the condensing units, requiring a maximum of five working days from receipt of order to dispatch

/cont...

Mark Henderson, managing director of NRW, said: “It’s a high quality addition to the NRW stable, based on excellent components that are industry standards.

“We are confident that installers as well as end users will appreciate the care that has gone into the design and build of the units. Everyone is looking for a good value option that saves time and money, and with the new PressCold range we have taken the hassle out, and added solid engineering – at a very affordable price.”

NRW is planning further launches under the PressCold name in the near future, including a range of packaged scroll condensing units.

This will be assembled in the UK by another manufacturing partner to NRW’s own high-tech specification.
